              This invention relates to defence-related signalling genes isolated from the sunflower (Helianthus annuas). The sence encode a neomanthin cleavage enzyme (NCE), an amino acid permease (AAP) and a glutamic acid rich protein (GRP). The signalling gene is useful for increasing the resistance of a plant to a pathogen such as tungus, virus, bacterium,
                                                                                                                                                                   Novel isolated defence-related signalling gene isolated from sunflower encoding neowanthin cleavage enzyme, amino acid permease or glutamic acid rich protein useful for increasing resistance of plant to a
nematode or insect (e.g. European corn borer), preferably

denote are also useful for stem-preferred regulation of gene expression in a plant. The genes are useful in agriculture, particularly in the three-ding of crop plants with improved agronomic traits, for modifying absciste acid (AsA) metabolism and for modifying amino acid transport and content in plants. The present sequence represents a glutamic acid rich protein (GRP) tike protein isolated from Synechocystis sp. The protein is Scherotimia spp., Phoma spp., or Phomopsis spp, by stably incorporating construct containing the gene into the genome of the plant. The gene is useful for regulating gene expression in a plant, in response to a stimulus such as infection with a pathogen, damage from a pathogen, hydrogen peroxide, jusmonic acid, methyl jasmonate, salicylic acid, oxalic acid or expression of a gene encoding exalic acid oxidase. The used in the characterisation of sunflower AAP.

C. pneumoniae causes respiratory discase such as pneumonia and bronchitis and is thought to be a contributing factor in heart discase, sarcoidosis, sinusitis, purulent otitis media, crythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Rewritatory disease; pneumonia; bronchitis; beart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharynqitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAY35162 standard; Protein; 1146 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immunegenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Genome sequence of Chlamydia pneumoniae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             04 NOV-1998;

	This invention describes a novel cold active protesses OPTA from Elavobacterium balustinam. The product of the invention is useful in determent compositions for use in cold temperature wash water. The characterization of the polynucleotide facilitates the production of an alternative relatively large waters of sold active protesses.	x 39338

AAA65890 to AAA66055 and AAB15886 to AAB16040 represent macleotide and protein sequences associated with E. egil prolliteration. AAA66057 represent primers used for sequencing E. coli prolliteration inhibiting nucleotide inserts in an example from the present invention can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               inhibition occurs in the second microorganism. The nucleic acid sequences itemstitled as being required to: bacterial growth and proliferation, can be used for antisense therapy for killing factoria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         destity a proliferation- required gene in a microorganism, by contacting a microorganism with a proliferation-required gene activity inhibitory

in dene therapy. A composition containing a polypeptide or polypucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous the peripheral nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, James et 1. The limit is activity demonstration and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leghaemias and c.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                     Tang VT.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of a deletion allele, termed CC (see AAY9556), generated by genomic deletion of the PKD/channel CC (see AAY9556), generated by genomic deletion of the PKD/channel CC domain of the lov-1 gene by PCR. LOV-1 is an orthologue of the human polycystin-1 (PKD1) gene that is defective in human (PKD1) generated by PCR. LOV-1 is an orthologue of the human polycystin kidney discuse (PKD). The LOV-1 protein is involved in chemosensory of males to the LOV-1 franschirtien in sensory neurons. It is required for 2 male CC sensory behaviours, 'response' of males to hermaphrodites, and CC (location' of the vulva. Nematodes such as C. elegans that CC express mutant or wild-type LOV-1 or PKD-2 (see AAY9557) can be used to study the functions of the proteins encoded by these genes, to CC involved in the disease, and to screen for druys that affect PKD. Behaviours controlled by the action of the genes or gene products are identified and used in the assays lines and provides a following that permits study of the etiology of PKD and provides a following compounds that may be used to treat or alter the disease or progression, lessen its severity or ameliorate symptoms
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Quary Match
